PROFILE

I started coding in high school using Dreamweaver. Later, I learned MySQL and PHP. Back then, I focused more on design than coding. But in university, I discovered joy in working with HTML, CSS, and JavaScript. It made me want to be a front-end developer. My passion for coding grew, and I plan to explore it more in the future. I find great satisfaction in working with HTML, CSS, and JavaScript. I aim to become a full-stack developer someday.

EDUCATION

- **King Mongkut's University of Technology Thonburi**
